

Getting started Installer version

1. Register an account at <http://my.opera.com> and backup important data.
2. Upload one file manually to the server to initiate it (*My page > Preferences > My files*).
3. Do the following on all computers:
 - 3.1. Close Opera.
 - 3.2. Run *setup.exe*.
4. Setup complete! From now on, use the shortcut *Sync now!* on the desktop whenever you want to synchronize. Just make sure you don't sync while Opera is running.

Troubleshooting

- *I can't enter my password.*
 - It's entered but not visible.
- *Nothing happens when I run sync.*
 - When no files differ, oSync doesn't do anything.

For help, go to http://sourceforge.net/forum/forum.php?forum_id=607853.

Standalone Tools

Bookmark to HTML converter – *Converts opera6.adr to HTML*

Place the bookmark file in the oSync directory and additionally edit *data/bookmarks.css*. Run *adr2html*. To automatically upload a HTML version of your Opera bookmarks, edit *settings/setup.ini*.

Bookmark cleaner – *Removes certain content from the bookmark file*

Run *adr_cleaner*, enter the relative path to your bookmark file when prompted. Chose which tags that should be removed. Bookmark descriptions starting with an "!" will always be ignored.

Backup

Edit the list of files to be backed up to the server in *settings/backup.ini* and then run *backup.exe*, and *restore.exe* to restore the latest backup.

Don't sync a certain folder

Set the folder description to "ignore". oSync will always ignore all the bookmarks in that folder.
